

NGA-905 Graphics Display and Alarm Management Software

NGA-905 Graphics Display and Alarm Management System allows the connection of up to 64 Nortech Addressable Fire Alarm Control Panels to a PC. Each panel can be displayed on the screen as if the operator were standing in front of it and can be fully controlled from the computer.

NGA-905 is simple to set up and to operate. Programming is password protected. Once in programming mode, each panel in the system can be enabled, and drawings can easily be imported from a graphics program such as Autocad®.

In the event of an alarm or fault, the location of the incident will be displayed on the computer screen, with three levels of zoom available to the operator. The individual device can be viewed and interrogated, and if necessary disabled.

A printer can be connected to the computer to record all alarm, fault and programming activities on the system. Whether or not a printer is connected, a log is kept of all events. This log can be periodically downloaded and printed if required. Other utilities are provided, such as a list of emergency phone numbers, and an operator notepad.

If a second computer is required at another location, this can be connected as a slave via an Ethernet network to the main computer. For longer distances, Fibre Optic cabling can be used. TCP/IP communications can also be used to allow remote access.

Specifications

HARDWARE	PC - CPU Speed 500 MHz minimum
OPERATING SYSTEM	XP, Vista and Windows 7
MEMORY USAGE	10 Mb (approx.) hard disk space, 256 Mb RAM
